PROTEST UNDER 37 CFR 1.291(a)

Re: Systems and methods for providing an improved toolbar

US File # 20040186775   Filed: January 29, 2004

Sirs:

Recently I found the above referenced patent filing and believe this filing has NOT issued in the U.S. The US File # is 20040186775. This Protest is filed within 60 days of Publication Date: 9/29/04.

I am voicing an objection as a concerned third party and as a U.S. Citizen. The patent filing describes at great length an advertising delivery and toolbar display system using a database containing advertisements maintained at the client level in cache or on disk (0062) in a client-server ad delivery system. (0021) This patent application relates to displaying advertising by matching voluntary user actions such as interacting with an executable client side program (0016), keyword matching (0063), URL matching (0063) or other actions used in a browser interface (0016) Entering a trigger event into a browser locator or toolbar window such as a keyword (0063) or URL (0063) (then makes a match with data in the remotely controlled, downloaded (0062) and continuously stores (0062) and updates the advertising database and in the event a match is made, an appropriate content or advertisement is displayed. (0009) This is referred to as "pull" advertising as a voluntary action on the part of a user interacts with a pre-established database and a targeted ad is displayed.

The abstract reads, "More specifically, in some embodiments the functionality of a toolbar may be manipulated in response to a single indication from a user. Also in some embodiments, a user may provide first and second indications prior to receiving advertising material."

The system described is a client-side advertising system, similar to other prior art systems described herein.

Disputed Claims are #19 and others in which the inventor refers to storing, triggering and displaying ads at the client level. The system is described in (0009) (0016) (0021) (0062) (0063) and others.

I am objecting to this patent filing as it is neither novel nor unique. It is of particular note that no prior art was submitted although similar systems were commercially offered well before 2004. (Where have these inventors been the past 5 years?) Further, regardless of the nature of the electronic communication system, i.e. internet, wireless, cable, telephone, etc. it's still a client-server communication network configuration. (0021) The filers are correct that a targeted system based on voluntary user actions, keywords and URLs interfacing with executable programs, interactive actions is more accurate and excels in its ability to deliver "relevant" ads at the exact moment of interest. However, the filers did not include the following references:

1. US Patent 6,141,010 ... equivalent technology
2. Gator.com (recently changed to Claria.com) has been marketing such a system since 1998
3. WO9955066 (A1) or EP1076983 (A1) ... equivalent technology

There may be more prior art preceding this 1/29/2004 filing.

I believe the Examiner should look very closely at the Claims made and reject this Application on the basis of the prior art contained herein.

United States Patent   **6,141,010**

Hoyle   **October 31, 2000**

Computer interface method and apparatus with targeted advertising

Abstract

A method and apparatus for providing an automatically upgradeable software application that includes targeted advertising based upon demographics and user interaction with the computer. The software application is a graphical user interface that includes a display region used for banner advertising that is downloaded from time to time over a network such as the Internet. The software application is accessible from a server via the Internet and demographic information on the user is acquired by the server and used for determining what banner advertising will be sent to the user. The software application further targets the advertisements in response to normal user interaction, or use, of the computer. Associated with each banner advertisement is a set of data that is used by the software application in determining when a particular banner is to be displayed. This includes the specification of certain programs that the user may have so that, when the user runs the program (such as a spreadsheet program), an advertisement will be displayed that is relevant to that program (such as an advertisement for a stock brokerage). This provides two-tiered, real-time targeting of advertising--both demographically and reactively. The software application includes programming that accesses the server on occasion to determine if one or more components of the application need upgrading to a newer version. If so, the components are downloaded and installed without requiring any input or action by the user.

CLARIA.

■ CORPORATE OVERVIEW

Overview

■ Claria Corporation Overview

Claria Corporation is the leader in online behavioral marketing, serving over 38 million consumers and more than 900 Advertisers -- including over 80 Fortune 1000 companies. Claria publishes advertising messages for top tier companies and agencies to consumers who are part of the GAIN Network, Claria's network of over 38 million consumers who agree to receive advertising based on their actual online behavior.

Unlike traditional demographic targeting, Claria's behavioral marketing model combines powerful insights into consumer behavior and the ability to deliver contextually targeted messages. The relevancy of the messages drives click-through and conversion rates up to 40 times higher than traditional banner ads -- boosting campaign results to unprecedented levels. The difference is Claria's deep insights into consumer online behavior. Claria allows advertisers to target consumers based on their individual needs and interests resulting in industry leading ROI, not mass demographically targeted Web site populations.

In addition to its advertising network, Claria provides marketing research and business insights through its Feedback Research division. Feedback Research delivers in-depth analytics of consumer Web usage patterns across the entire Internet that cannot be attained via any other research provider. It also provides full service custom marketing research to Fortune 1000 clients. With exclusive access to the GAIN Network's 38 million consumers, Feedback Research surveys hard to reach consumers, based on their individual online behavior, quickly and cost-effectively.

■ History

Claria was founded in 1998 as The Gator Corporation to deliver the promise of one-to-one marketing on the Internet. The guiding vision was to develop a massive consumer audience by offering valuable web/software content for free in exchange for the right to show highly targeted advertising based on consumers' anonymous surfing behavior. Launched in June 1999, the Gator eWallet was the company's first free ad-supported software product, and it quickly grew to become the most popular product in its category.

By November 1999, Claria had revolutionized the online advertising industry by introducing its contextual and behavioral relevant online advertising model. This new advertising method resulted in unparalleled ROI for advertisers.

Claria headquarters are located in Redwood City, California, with U.S. offices in Los Angeles, Chicago, New York, Detroit, Austin, and International offices in the U.K and Asia. Claria is backed by top-tier venture capitalists such as Greylock, Technology Crossover Ventures, U.S. Venture Partners, Investor AB and Crosslink Capital.

Why are some tabs gray for certain documents?

Why does a list of documents with the title Also published as appear sometimes and what are these documents?

What does A1, A2, A3 and B mean after an EP publication number which appear sometimes under the Also published as list?

What is a cited document?

Why do I not always see cited documents?

Why do I sometimes see the abstract of a correspondent

Abstract of CA2328913

A telephone call management computer program that provides both call management features and long distance savings for telephone consumers and marketing and advertising services for sponsor companies that wish to advertise to the consumer is disclosed. The call management program is initially stored on a host computer (12) and is then downloaded upon request to user computers (22) along with advertisement banners selected by the sponsor companies. When used, the program automatically front-loads a long distance carrier's PIC code in front of all long distance calls made from the user computers to permit consumers to automatically make long distance phone calls at discounted rates without memorizing numerous PIC codes and without continually shopping for the best long distance rate. The program also provides many enhanced telephone calling options and displays the banners and other advertising directly on the user computers (22) while the consumers use the program.
